

Power generator GT-5400-E

The power generator GM-5400-E is equipped with a 420cm³ 4-stroke petrol engine and 3-phase maximum power output is 5,4 kW. It has copper wiring in the alternator and thanks to that is more heat resistant!

The engine is protected with low oil level protection and also overload protection - long lifetime and easy maintenance.

The generator has a robust metal frame for the device's protection and is fitted with big inflated wheels and comfortable handles for easy portability.

25-liter fuel tank gives autonomy for almost 10 working hours.

The generator is suitable for use at home or construction field to power electrical tools.

- Electric starter + recoil starter
- Max 5,4 kW, rated power output 5 kW
- 2 x 230V EU sockets
- 1 x 400V EU socket
- Power stabilisator AVR
- Voltmeter
- Copper wiring in the alternator
- Dimensions: L x w x h 76 x 70 x 65 cm
- Weight 79 kg

GUDNORD+ equipment has not been designed for use in commercial or industrial application.
